

STROBE Statement—checklist of items that should be included in reports of observational studies

|                          | Item No | Recommendation   | Page / lines No                    |
|--------------------------|---------|--|------------------------------------|
| Title and abstract       | 1       | (a) Indicate the study’s design with a commonly used term in the title or the abstract   | 1/29-31                            |
|                          |         | (b) Provide in the abstract an informative and balanced summary of what was done and what was found  | 1/32-35, 2/36-49                   |
| Introduction             |         |  |                                    |
| Background/rationale     | 2       | Explain the scientific background and rationale for the investigation being reported   | 7/217-245, 8/246-280, 9/281-292    |
| Objectives               | 3       | State specific objectives, including any prespecified hypotheses   | 9/293-295                          |
| Methods                  |         |  |                                    |
| Study design             | 4       | Present key elements of study design early in the paper  | 9/300-301                          |
| Setting                  | 5       | Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection  | 9/302-314, 10/315-336              |
| Participants             | 6       | (a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up<br>Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls<br>Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants | 9/300-306                          |
|                          |         | (b) Cohort study—For matched studies, give matching criteria and number of exposed and unexposed<br>Case-control study—For matched studies, give matching criteria and the number of controls per case   |                                    |
| Variables                | 7       | Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable   | 10/315-336                         |
| Data sources/measurement | 8*      | For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group   | 10/315-336                         |
| Bias                     | 9       | Describe any efforts to address potential sources of bias  | 10/316-317, 10/319-321, 10/324-326 |
| Study size               | 10      | Explain how the study size was arrived at  | -                                  |
| Quantitative variables   | 11      | Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why   | 10/337-345,                        |

|                     |    |   |                        |
|---------------------|----|---|------------------------|
|                     |    |   | 11/346-347             |
| Statistical methods | 12 | (a) Describe all statistical methods, including those used to control for confounding   | 10/337-345, 11/346-347 |
|                     |    | (b) Describe any methods used to examine subgroups and interactions   | 10/343-345, 11/346     |
|                     |    | (c) Explain how missing data were addressed   |                        |
|                     |    | (d) <i>Cohort study</i> —If applicable, explain how loss to follow-up was addressed<br><i>Case-control study</i> —If applicable, explain how matching of cases and controls was addressed<br><i>Cross-sectional study</i> —If applicable, describe analytical methods taking account of sampling strategy |                        |
|                     |    | (e) Describe any sensitivity analyses   |                        |

| <b>Results</b>           |         |  |  |
|--------------------------|---------|--|--|
| Participants             | 13<br>* | (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed            | 10/317   |
|                          |         | (b) Give reasons for non-participation at each stage   | 9/312-314                                      |
|                          |         | (c) Consider use of a flow diagram   |  |
| Descriptive data         | 14<br>* | (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders   | 9/302-304, 10/315-312                          |
|                          |         | (b) Indicate number of participants with missing data for each variable of interest  |  |
|                          |         | (c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount)   |  |
| Outcome data             | 15<br>* | <i>Cohort study</i> —Report numbers of outcome events or summary measures over time  |  |
|                          |         | <i>Case-control study</i> —Report numbers in each exposure category, or summary measures of exposure   |  |
|                          |         | <i>Cross-sectional study</i> —Report numbers of outcome events or summary measures   |  |
| Main results             | 16      | (a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included | 11/336   |
|                          |         | (b) Report category boundaries when continuous variables were categorized  |  |
|                          |         | (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period   |  |
| Other analyses           | 17      | Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses   | 13/385   |
| <b>Discussion</b>        |         |  |  |
| Key results              | 18      | Summarise key results with reference to study objectives   | 14/402-407, 14/419-420, 14/423-424             |
| Limitations              | 19      | Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias   | 15/439-444                                     |
| Interpretation           | 20      | Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence                                   | 14/390-401, 14/408-418, 14/420-422, 15/425-429 |
| Generalisability         | 21      | Discuss the generalisability (external validity) of the study results  | 15/425-438                                     |
| <b>Other information</b> |         |  |  |
| Funding                  | 22      | Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based  | 3/84, 5/166                                    |

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.
